PROJECT SHOWCASE

Paint My Home VR

Virtual Reality Interior Color Customization Experience

Project Category	**Virtual Reality / Interior Design**
Development Engine	Unity
Programming Language	C#
Target Platform	Meta Quest VR (where supported by the project build)

1. Project Overview

Paint My Home VR is an interactive virtual reality experience developed using Unity and C#. It presents a virtual home interior where users can explore the environment and choose from available interior colors through an interactive VR color-selection interface. The experience is designed to make color customization intuitive and engaging within a 3D living space.

2. Project Objectives

- Create an immersive virtual home environment for interior color visualization.
- Provide an intuitive interface for selecting available colors.
- Use VR interactions to make the customization process engaging and accessible.
- Deliver clear visual feedback as users interact with the customization interface.

3. Key Features

- **Interactive Color Selection:** A VR interface that lets users choose from the color options available in the experience.
- **Immersive 3D Environment:** A virtual living-room setting that presents interior elements in context.
- **VR-Based Interaction:** Controller-based interaction for selecting options and navigating the experience.
- **User Interface:** An interactive UI designed to make color selection straightforward.
- **Visual Feedback:** Visual responses that help users understand their selections during customization.

4. Technologies Used

- **Unity:** 3D environment creation and application development.
- **C#:** Interaction logic and application behavior.
- **Virtual Reality (VR):** Immersive user experience and interaction.
- **Meta Quest:** Target VR platform, where supported by the project build.

5. My Contribution

- Developed VR interaction systems using Unity and C#.
- Implemented interactive color-selection mechanics.
- Integrated UI elements and interactive objects.
- Designed and configured the virtual home environment.
- Developed gameplay logic to manage user interactions and customization.
- Tested VR interactions to improve usability and responsiveness.

6. Project Workflow

1. The user enters and explores the virtual home environment.
2. The user opens or interacts with the color-selection interface.
3. The user chooses from the available color options.
4. The environment provides visual feedback for the selected customization.

7. Project Demo and Visuals

The Paint My Home VR project showcases an immersive virtual reality interior customization experience, featuring interactive color selection and a 3D home environment.

8. Repository Contents

The public showcase repository can contain this documentation, project screenshots, and a link to the gameplay demonstration. The Unity source project is not included in the showcase repository.

9. Conclusion

Paint My Home VR demonstrates the use of Unity, C#, and VR interaction design to create an immersive interior color-customization experience. The project combines a virtual home environment with an interactive selection interface to help users explore color options in a 3D space.
